Take Away

Write a function that asks for an integer and prints the square of it. Use a while loop with a try, except, else block to account for correct inputs.

```python
In [ ]: def ask():
            pass
```

```python
In [48]: ask()
```

Input an integer: null

An error occurred! Please try again!

Input an integer: 2

Thank you, yor nmber squared is: 4
